Hardware:

- Integrated with Nordic Bluetooth chip (Ceramic Antenna)
- Standard CAN BUS protocol
- Led display

The RideControl ONE will collect all the necessary info from e-bike system by CAN BUS and it can show the different assist mode, system error code and battery capacity by the different combination of led, After that, the ONE, as a master controller of the e-bike system, it can send the command to e-bike system to change different assist mode and turn on/off light

External introduction:

RideControl ONE takes your E-bike riding experience to new levels with integrated button controls and a clean handlebar free of any display. RideControl ONE integrated with Nordic Bluetooth chip, ,The E-bikes equipped with RideControl ONE can connect with the Giant E-bike App to function as your E-bike display.
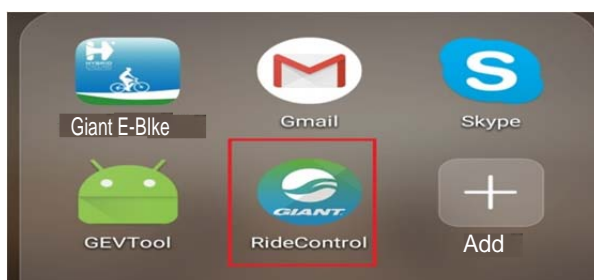

Small, integrated button controls let you shift through support modes with great ease. The buttons are designed to use in all conditions. They are more robust and designed with a pattern for added finger grip. The communication protocol for RideControl ONE is base on the standard CAN BUS and it

will collect all the necessary info from e-Bike System for show, The controls are thoughtfully designed with LED lighting that shows your battery level and support mode while you are riding. The RideControl ONE has a minimalist design, displaying the essential information needed to help riders perform their best.
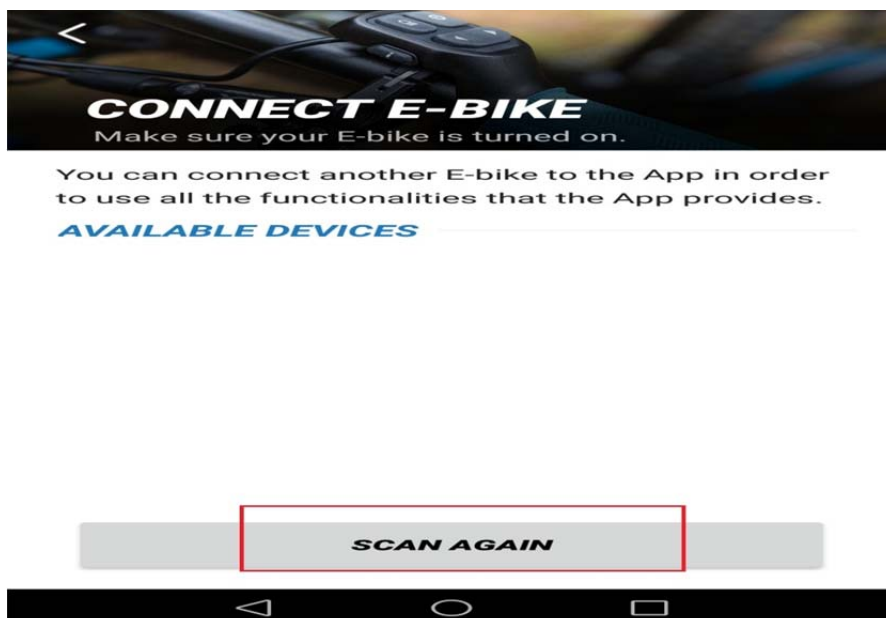

| ONE Hardware version number	20180402	ONE software version number	20171204
